

Energy Management Services from Peregrine

Improve efficiency. Cut costs. Make an impact.

Energy information management and reporting:

Want to better understand your energy use? Peregrine Focus, Peregrine's web-based energy management and reporting tool, centralizes and simplifies complex energy data for large building portfolios. Interactive dashboards and reports make it easy to compare building performance, target poor performers, monitor progress, and report on success.

Building assessments, audits, and engineering:

Need to know which energy investments make the most sense? Peregrine uncovers savings opportunities, delivers concrete recommendations, and provides the support to carry those recommendations out for projects in any phase, and including electrical and mechanical equipment and systems, single buildings and large numbers of buildings, and energy efficiency and renewable energy.

Owner's agent services:

Want an expert on your side of the table when dealing with energy vendors? For clients that need a trusted ally, Peregrine serves as owner's agent, representing clients in engagements with energy service companies, overseeing equipment commissioning, and assisting with the competitive procurement of energy supplies.

Measurement and verification of savings

Getting the value that you were promised? Measurement and verification services give clients the confidence that energy efficiency projects are delivering the anticipated results.

Energy master plans

Looking for an alternative to running equipment until it fails? Peregrine helps clients to develop and implement energy master plans that integrate all aspects of energy efficiency planning and ensure their alignment behind achievable goals.

Program design

Working to satisfy all stakeholders? For states, municipalities, and utilities, Peregrine brings extensive industry experience to the design and implementation of energy programs that engage participants and deliver clear, measurable results — energy programs that work.

Expertise

Portfolio- and building-level auditing, analysis, and planning

Energy information management

Competitive energy markets and energy procurement

Energy efficiency and renewable energy

Renewable portfolio standards

Standby rates and interconnection standards for on-site generators

Advanced metering

Program design and evaluation

Stakeholder facilitation

Program and project management

Energy project development

RFQ and RFP preparation

Performance benchmarking

Monitoring and verification of savings
