

## Energy information management & reporting

Identify inefficient buildings at a glance.

Evaluate the size of your organization's carbon footprint quickly.

Monitor energy use and spending over time by building or department, with just a few clicks of a mouse.

Peregrine Focus centralizes and simplifies energy management and reporting – especially for organizations with a large number of buildings. A completely web-based tool with no software to install or maintain, Peregrine Focus transforms complicated energy data into easy-to-understand reports that are informative, visually engaging, and immediately useful.

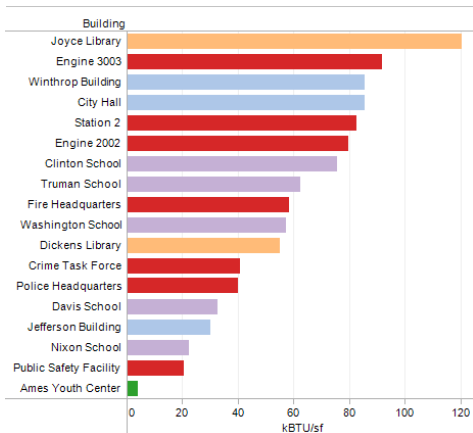

### Bringing complex energy pictures into focus

Peregrine Focus frees energy managers from cumbersome spreadsheets and mountains of detail.

It makes it easy for them to:

- Understand their energy use
- Monitor that use and associated costs
- Plan effective energy programs
- Communicate efforts to reduce their carbon footprint and save money

A central location for managing and monitoring energy information, Peregrine Focus accepts and organizes all energy use, cost, and emissions data. Information can be entered by account or uploaded in bulk via spreadsheet.

Clear reports make it easy to compare energy use across buildings and identify heavy users.

Interactive reports then distill that data to its key points and make those points easy to see. Clear charts and graphs eliminate data overload by highlighting just the information that energy managers need to take action. Accessible even to non-technical users, these reports can be customized with a few mouse clicks to display as much or as little information as is needed, then easily downloaded and shared as an image, a crosstab, or a pdf.

### Enhancing Portfolio Manager data

Peregrine Focus also helps Portfolio Manager users to get more out of their data. By pulling data directly from Portfolio Manager into its reports, Peregrine Focus provides users with new, graphically rich views of their data that make it even more valuable for monitoring and planning.

### Features

Web based – nothing to download or install

Visually engaging, customizable, interactive reports

Capable of reporting energy data for any fuel

Able to accept bulk data upload by spreadsheet

Integrated with Portfolio Manager

Easy to use in any popular browser
